ShipLinx TMS Optimizes Transportation Networks

1. TRANSPORTATION PLANNING

With all modes in one place, it's easy to consolidate loads to cut freight spend. Rates, transit times, multi-stops for truckloads & multi-leg shipments are optimized to save time and money.

2. CARRIER SELECTION

With automated business rules for rate shopping, truckload auction, MABD/ MAOD and commercial vs. residential shipments, shippers choose the right mode at the best price to arrive within the right time frame.

3. TRANSPORTATION EXECUTION

Save time and get shipments out the door faster with automated multi-carrier parcel manifesting, freight carrier tendering, and any domestic or international shipping document.

4. REAL-TIME VISIBILITY

Exceed customer expectations with real-time track & trace visibility and over-the-map insights across all parcel and freight shipments in one place.

5. DYNAMIC REAL-TIME REPORTING

Drag & Drop reports with custom calculations and charts make it easy to slice and dice data to optimize a multi-modal transportation network. KPIs and dashboards spot trends for shippers to proactively make adjustments.

6. INFINITE INTEGRATIONS

Our best-in-class robust integrations connect shipping and tracking intelligence with any ERP, WMS, or any business system to future-proof technology investments and maximize ROI.

7. SOURCE & PROCURE

The multi-modal rate repository makes rate administration simple and saves time for inbound, outbound and 3rd party shipments. It's easy to update rates, add carriers or locations, or international shipments.
