

Currency Management

Currency management does more than automate calculations while working in different currencies around the world. Currency management also minimizes a growing company's financial risk when currency values change dramatically. You can track your gains and losses and take steps to protect your financial health.

- Calculate realized and unrealized gains and losses
- Translate financial statements automatically
- Transact business in multiple base currencies
- Consolidate reporting across currencies and countries

The screenshot shows the Acumatica Currency Rates interface. It includes a search bar, navigation tabs for 'CURRENCY RATE ENTRY' and 'EFFECTIVE CURRENCY RATES', and a table of rate details. The table columns are: From Currency, Currency Rate Type, Currency Effective Date, Currency Rate, Mult.Div., and Rate Reciprocal.

* From Currency	* Currency Rate Type	* Currency Effective Date	* Currency Rate	* Mult.Div.	Rate Reciprocal
CAD	PROJRT	1/1/2019	1.40000000	Divide	0.71428571
CAD	SPOT	8/1/2022	1.28440700	Divide	0.77856941
EUR	PROJRT	1/1/2019	0.90000000	Divide	1.11111111
EUR	SPOT	8/1/2022	0.97443200	Divide	1.02623888
GBP	PROJRT	1/1/2019	0.80000000	Divide	1.25000000

Key business benefits

- Maintain balances in a local currency and the base currency for each vendor and customer.
- Calculate realized and unrealized gains and losses automatically.
- Consolidate reporting across companies and base currencies.
- Automatically revalue general ledger accounts.
- Monitor fluctuations through drill-down reports and dashboards.

Conduct Business Globally with Currency Features for International Subsidiaries, Vendors, and Customers

Save time managing international subsidiaries and operations. Currency Management automatically computes realized and unrealized gains and losses, performs account revaluations, and translates financial statements. Operations in multiple currencies become available through all Acumatica financial modules.

KEY FEATURES OF CURRENCY MANAGEMENT

- **Realized gains and losses calculations.** Automatically calculate realized gains and losses from foreign currency transactions entered into any financial module. This can include receiving payments from customers, issuing payments to vendors, and transferring funds between accounts.
- **Unrealized gains and losses adjustments.** Create adjusting entries for unrealized currency exchange gains and losses. Automatically prepare auto-reversing entries in the General Ledger for all open documents recorded in foreign currencies.
- **Financial statement translation.** Manage subsidiaries that operate in a foreign currency—or prepare your financial statements in a foreign currency. Translation of the trial balance follows FASB-52 standards. Automatically calculate translation gains and losses. Automate the consolidation of financial statements from multiple subsidiaries in combination with the General Ledger module.

"We already operate in GDP, USD, EUROS, and are exploring accepting more local currencies. Acumatica can take in data and translate it to GRD, and we have visibility into taxes by country."

—James Day, Co-Founder and COO, Mous

Revaluation of General Ledger Accounts

Revalue General Ledger accounts denominated in a foreign currency. Adjust the value of the base currency and post the appropriate currency gain or loss transaction.

Unlimited Currencies and Rate Types

Assign different rate types to vendors and customers that use the same foreign currency. Currency Management supports an unlimited number of currencies and rate types. You can update exchange rates at any time. Support multiple base currencies and consolidate reporting across companies with different base currencies.

Multiple Base Currencies

Support multiple base currencies and consolidate reporting across companies with different base currencies.

Configurable Decimal Precision

Configure the number of decimal places for each currency.

Automatic Handling of Rounding Differences

Automatically compute rounding differences sensitive to the decimal precision you want. Rounding differences are automatically posted to a designated General Ledger account.

Complete Tracking of Gains and Losses

Create detailed analytical reports of gains and losses. Assign accounts and subaccounts for each currency to track realized and unrealized, translation, revaluation, and rounding gains and losses based on currency fluctuations.

Currency Rate Lookup

Leverage calculations that use the transaction date and rate type for the subject transaction. Receive a warning for manual rate override entries that exceeds the acceptable rate variance.

Historical and Auditing Reports

Use predefined reports to monitor the history of currency rates as well as translations and revaluations performed.

Audit Trail

Create a complete audit trail of all currency-related transactions. Include the ID of users who entered a transaction or modified a record. Attach notes and supporting electronic documents directly to the transactions.

Predefined List of Currencies

Select from a predefined list of currencies included in the ISO 4217 standard for use in Acumatica. Currencies will display with the proper currency symbol.

ABOUT ACUMATICA

Acumatica Cloud ERP is a comprehensive business management solution that was born in the cloud and built for more connected, collaborative ways of working. Designed explicitly to enable small and mid-market companies to thrive in today's digital economy, Acumatica's flexible solution, customer-friendly business practices, and industry-specific functionality help growing businesses adapt to fast-moving markets and take control of their future.
